

SandPro OMP — Decisions Needed

Prepared 2026-06-27 · for Tim Dibben & Jake Feil · from the OMP data→display bridge plan

The platform's features are built; the work now is wiring each on-screen number to a real source. Most of that wiring is blocked on the decisions below — they're product/ownership/threshold calls that shouldn't be guessed. Please fill in the answers and send back. The items marked **BLOCKS OKR LOAD** are the only two needed to seed the real 91 OKRs.

Already confirmed (no action needed — listed so you can correct if wrong)

Existing 18 objectives	Start clean — treat as test data, seed the real OKRs fresh.
Progress meaning	Data-driven by type (metric / rollup / workflow), not a hand-typed number.
OKR grouping	Keep the 17 groups as a sub-tag under the 5 framework departments.
Who is an admin	profiles.role = executive OR manager (edit anything except calculated fields).

Open decisions — please answer

1. Unresolved / compound OKR owners **BLOCKS OKR LOAD**

Several owners on the 2026 sheet aren't a single named person in the system. Pick ONE primary owner for each:

JB/JS · LD · Brad/Bryce · Gershon/Dustin · HUNTER/DREW · JPL · Matt · Jaelen/Thomas · Aiden · Malcolm/Field Service Managers

Answer:

Why it matters: Each OKR needs one accountable person; otherwise it loads with no owner.

2. Baseline / target — numeric vs words **BLOCKS OKR LOAD**

Sheet values mix percentages, dollars, counts, and prose (“Needs Improvement”, “Define what success means”).

Which metrics should be tracked as real numbers (so they drive a rolling average and a progress bar) vs. kept as a written status only?

List which OKRs / groups are numeric, or give a rule (e.g. “anything with a % or \$ is numeric, prose stays a manual status”).

Answer:

Why it matters: Determines which OKRs get an auto-calculated progress bar vs. a manual on-track/at-risk status.

3. Confirm 4 group → department guesses

These 4 OKR groups didn't map cleanly to one of the 5 departments. Confirm or correct the department for each:

Dispatch → ? · Inventory / Logistics → ? · Field Ops → ? (Automation / Wellhead / Flowback) · Frac Repair → ? (Wellhead / Flowback)

Answer:

Why it matters: Anything that groups by department will mis-bucket these until confirmed.

4. Legacy → new department mapping

The 5 new departments replace the legacy 10. Where does each old department land?

Operations → ? · Field Operations → ? · Shop → ? · Admin → Business Team / (Accounting or Purchasing?) · Leadership, HR, Quality, Safety, Sales → Business Team / (confirm class)

Answer:

Why it matters: Needed before migrating existing people/records so department views don't double-count.

5. KPI thresholds & definitions

What turns raw counts into green / yellow / red on the KPI page?

• A key result is "stale" after ____ days with no update. • "On track / at risk / off track" cutoffs: _____. • For "X of Y OKRs on track," which objectives count in the denominator?

Answer:

Why it matters: The KPI summary can't show a trustworthy status roll without these cutoffs.

6. Reporting cadence default

Each OKR can report Monthly or Quarterly.

Default for new OKRs: Monthly / Quarterly (circle one). Any groups that are the opposite of the default:

Answer:

Why it matters: Drives which monthly cells are editable and how the rolling average is computed.

7. NCR ↔ objective relationship

Should NCRs feed into objectives, or just be summarized?

(a) NCRs only summarize on the KPI page (b) NCRs also link into objectives and roll into progress/KPIs. Is the current NCR field set final? Yes / No: _____

Answer:

Why it matters: Only 2 of 354 NCRs are linked today; this decides whether linking is expected going forward.

8. Re-import precedence & picture retention

On a mass re-import of the tracker:

• New list overwrites the old? Yes / No. • Pictures stay attached to the report number across imports? Yes / No. • Keep all revisions forever, or last ____? • Unique key that ties a picture to its record: _____

Answer:

Why it matters: Defines the import safety rules before the export/import package is built.

9. Rollout vs. sales feature scope

Which export / presentation features are needed for the team rollout NOW vs. deferred to the sales-readiness package?

Needed now: _____ Defer to sales package: _____

Answer:

Why it matters: Keeps the rollout focused; advanced exports were deliberately planned for later.

Once #1 and #2 are answered, the real 91 OKRs can be loaded and the OKR + KPI screens light up. The rest unblock the remaining wiring (department migration, KPI thresholds, NCR linkage, export/import).
