Production audit captured May 30, 2026 4:20 AM UTC. Source: objectivetracker.net Fix-It Feed.

Total Items	Verified	Partially Verified	Not Verified	Needs Product Decision	QA Cleanup
20	19	1	0	0	0 leftovers

Fix Structure Assessment

Overall opinion: the Fix-It structure is useful and the team is using it exactly for the right thing: concrete screenshots, short problem statements, and visible accountability.

Main weakness: the board currently has only Open / I'm on it / Fixed, so items can be marked fixed before the reporter has proof or acceptance. Jake's own 'says fixed and its not' post is the clearest signal.

Recommendation: add either a real Verified state or require an evidence note/screenshot before closing. Fixed should mean changed in production; Verified should mean checked live by someone other than the implementer.

Current audit result: most items have credible live proof now, but the process should stop treating the green Fixed badge as the final quality gate.

I wanted to flag an issue I've noticed while creating an objective. Several times now, while I'm typing inside the creating a new objective/description area, if I move my mouse from right to left within that section, the chat disappears and takes me back to the main Objectives menu.

When that happens, the draft I was working on is lost, and I have to go back into the objective and start typing everything again. This has happened multiple times, so I'm not sure if a webpage navigation behavior is being triggered by the mouse movement or if it's a bug within the Objectives section.

Also, if possible, it may be helpful to have some type of draft or autosave option while writing messages or creating objectives, so the user doesn't lose what they have already typed if the page refreshes, closes, or navigates away by accident.

Would it be possible to take a look at that? Thank you!

I wanted to flag something I noticed while posting a few messages.

In the last few messages, I only tagged @Jake Feil but the system automatically added the other Jake as well. I've had to manually remove Jake Harbaugh from the notifications each time.

I'm not sure if this is related to the tagging logic, name matching, or the notification assignment, but I wanted to bring it up in case the system is auto-selecting both users because they share the same first name.

Could you please take a look when you have a chance?

Thank you!

Original item: Hey Andrew, I have another small feedback item/question. On some web platforms, when navigating between sections, you can right-click a tab or button and open it in a new browser tab or window. For example, if I’m working in the Objectives section, it would be helpful to right-click and open Fix-It in a separate tab without having to duplicate the entire pa...

Finding: The app navigation is implemented with href-backed links, so browser open-in-new-tab behavior works while normal clicks still route inside the app.

Verified

Original item: Would it be possible to add an option to add a new person or employee to the Organization Chart? There are a few teams where I may need to add multiple members, so having an “Add Person” or “Add Employee” option would make the update process much easier. Thank you!

Finding: The live Organization page exposes Add Employee and related org editor controls for users with permission.

Verified

Original item: Could you add the option to edit a message after sending it (Objectives section or any typing section that may need a quick correction, would be nice to have the option for edition), like WhatsApp does? Sometimes a typo slips through or you need to fix a word at the last minute. Thanks for everything again!

Finding: The Messages tab shows an Edit action and editable text box for a sender-owned message.

Verified

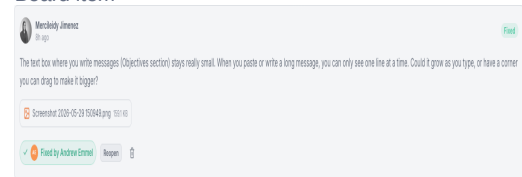

Original item: The text box where you write messages (Objectives section) stays really small. When you paste or write a long message, you can only see one line at a time. Could it grow as you type, or have a corner you can drag to make it bigger?

Finding: The production objective message composer accepts multiline text, and sent messages expose an Edit flow.
