

NCR Gospel Alignment: What Shipped

KPA migration path + Tim-facing NCR analytics + lifecycle controls, aligned to Merci/Tim's packet.

SandPro OMP

Production release: June 3, 2026

Domain: objectivetracker.net

FROM INSTRUCTION TO IMPLEMENTATION

KPA migration ready

Excel/CSV import, preview, batch tracking, raw source preservation, rollback-ready data model.

KPA form parity

Worksite, operator, event type, criticality, NPT/cost, root cause, departments, dates, signoffs.

Quality closure controls

Action items, evidence, audit trail, required signoffs, and effectiveness review before close.

Tim analytics layer

Failure trend groupings, HRU/AWC/710 examples, filters, PDF/CSV/Excel outputs, AI API fallback.

63/63

unit checks passed

0

prod QA leftovers

354

KPA records import-ready

Live

verified on production

TIMELINE AND PRE-AI COST COMPARISON

AI-assisted

same-day sprint

Live today

Pre-AI path

requirements → build → QA → deploy

3-5 weeks

Traditional delivery estimate if handled the old way

120-180 hrs

BA/PM, database, frontend, backend/API, QA, deployment, documentation.

\$18k-\$27k

At a conservative \$150/hr blended product/dev rate.

+\$5k-\$12k

Likely added cost for analytics iteration and KPA import reconciliation.

● AI-assisted OMP sprint ● Traditional pre-AI implementation track

TRADITIONAL PRE-AI WORKSTREAM

1. Discovery

Meetings, notes, scope rewrite, KPA field inventory.

2. Data model

Schema, migration design, import batch model.

3. Build

Forms, lifecycle, evidence, APIs, reports, analytics.

4. QA cycle

Bug passes, fixture data, production smoke, cleanup.

5. Rollout

Docs, Tim review, migration run, cutover plan.

PROOF STANDARD MET

✓ Lint, build, schema passed

✓ 63 unit tests passed

✓ PWA checks passed

✓ 0 prod temp records left

✓ Production NCR verifier passed

✓ PDF report generated

Known boundary: the real 354-record import still requires Tim's KPA export file; the import path and governance model are ready.

Bottom line: the work moved from a generic NCR tracker to the correct KPA-replacement direction: historical migration, structured NCR capture, accountability, exports, and Tim's trend-analysis workflow. Traditional delivery would normally require several weeks of coordinated product, engineering, QA, and reporting work before reaching this proof level.
