

Onboarding, Kanban, and Export Readiness

This rollout makes the Dashboard/Objectives update explain itself on first login, fixes the Kanban board scroll trap, and verifies that the OKR exports produce usable report output rather than empty shells.

What changed

- Added a one-time, versioned first-login guide explaining how Dashboard lenses, Objectives structure, OKR tree, projects, gates, and exports fit together.
- Changed the Kanban Objectives view so the board itself scrolls vertically with mouse-wheel behavior while preserving horizontal column movement.
- Made OKR exports safer when a lens has no matching rows by adding explicit no-record fallback rows instead of header-only files.
- Added regression coverage for first-login behavior, Kanban wheel scrolling, and populated CSV/XLSX/PDF/audit report outputs.

Why it matters to the user

New users now get a plain-English bridge from Dashboard to Objectives the first time they enter the updated app. The Kanban board can be worked naturally without getting stuck at the bottom of the viewport. Exports are now trustable operational artifacts: if a report has data, it shows it; if the selected lens has none, it says so clearly.

Verification

CHECK	RESULT	EVIDENCE
Local lint/unit/schema/build	Passed	npm run lint, npm run test:unit, npm run test:schema, npm run build
Local human-click checks	Passed	Playwright clicked first-login guide, Kanban view, mouse wheel, and export buttons.
Production deploy preflight	Passed	deploy:prod completed release:preflight, Vercel deploy, and smoke:prod.
Live targeted QA	Passed	Production desktop: explainer, Kanban scroll, CSV, Excel, PDF, and audit exports. Production mobile: explainer.

Deployment

Production is aliased to **https://objectivetracker.net** from Vercel deployment **dpl_CNVJkovBzDRkMEnSyaZy5RUyDk1z**. Production smoke confirmed the login shell, admin read-only surfaces, and member credential gate.
