

OKR + Project Assessment Framework

Report Date: June 11, 2026

Production: [objectivetracker.net](#)

Deployment:

dpl_DJDUGa1kGNPWjXvo82ejCjRdYh7V

Alias URL: [sandpro-l0y93r0in](#)

Dashboard/Objectives cohesion, project gates, signoffs, audit evidence, and exports.

Executive Summary

SandPro now has a full OKR and project-assessment shell inside the existing Dashboard and Objectives workflow. Existing objectives are preserved and auto-classified, low-confidence classifications stay visible, and projects now carry stage gates, assessment artifacts, approvals, purpose-scoped files, audit events, and exportable packs.

Live Proof Metrics

15/15OBJECTIVES
VISIBLE**6**PROJECT
TABLES**4**REQUIRED
SIGNOFFS**9/9**

PROD CHECKS

What Changed

- Added OKR semantics separate from progress tracking: level, period, weight, classification status, confidence, and reason.
- Added project records with Idea, Assessment, Approved, Active, Done, and Killed stages plus required gates.
- Extended objective details with Structure, Projects/Gates, Files, Audit, and Signoff workflows where relevant.
- Added Dashboard/Objectives lenses for OKR level, quarter, stale KR, project stage, gate blockers, and review needs.
- Added tree view and exports: Jake weekly one-pager, department scorecard, R&D pipeline, PDF, Excel, and per-project audit pack.

Validation

- Supabase release migration applied live; schema check passed with new tables, RLS, realtime, grants, and storage bucket.
- Passed: lint, unit, schema, build, release preflight, and targeted OKR framework Playwright coverage.
- Production smoke passed: login shell, admin navigation, member access, Dashboard framework strip, tree view, exports, and form rules.
- Evidence saved at [docs/reports/evidence/okr-project-framework-2026-06-11](#).

Code

Targeted framework files only.

Schema

Live Supabase release applied.

Deploy

Ready on [objectivetracker.net](#).

Follow-up

Jake can tune approval thresholds later.

Scope Note

No objectives were deleted, archived, or hidden. Existing records were classified conservatively, project gates use default senior-management approval rules, and final assessment form templates remain editable v1 structures with upload support.
