

NCR Filtering + Analytics Polish

Executive Summary

The NCR tab was upgraded from a basic tracker into a faster review workspace with clickable KPI filters, stronger table sorting, scoped analytics, and clearer KPA import preview controls. The goal was better day-to-day triage without changing the underlying NCR data model.

What Changed

- Clickable NCR KPI cards now act as quick filters and show an active state.
- Tracker filters now include worksite/area, attention level, and report-date range.
- Table columns can be sorted, with clearer status labels and expanded search matching.
- Analytics now use a shared scope so KPIs, charts, trend examples, and exports stay aligned.

User Impact

- Users can answer "what needs attention" with fewer clicks.
- Filtered views now explain how many NCRs are shown and provide one-click clearing.
- Analytics exports reflect the exact scope the user is reviewing.
- KPA import preview now makes filtered rows and total commit count explicit.

Files Included

- `src/pages.jsx` - NCR filtering, sorting, analytics scope, import preview.
- `src/components.jsx` - KPI active state support and accessibility state.
- `src/index.css` - segmented controls, active KPI styling, responsive filters.

Validation

- `npm run lint` passed.
- `npm run test:unit` passed with 66 of 66 tests.
- Vite production build completed successfully in the agent environment.
- Commit `b802a83` was pushed to `origin/main`.

Committed

NCR polish package is on local and remote main.

Tests Passed

Lint and unit gates were reported clean in the handoff.

Deploy Pending

Deployment was intentionally not performed per the handoff.
