

The Decoder Refresh Report

NCR Field Key + Whole-App Polish

Commit: fc33ac1

Date: June 9, 2026

Release: Pushed, deploy blocked

Executive Summary

This refresh adds a plain-language Field Key, internally named "The Decoder", to reduce confusion around NCR labels such as Observer, Employee, NCR Owner, and NPT. It also smooths the wider app with button polish, cleaner NCR copy, sticky table headers, aligned controls, and reduced visual jitter.

What Changed

- Added a context-aware Field Key panel for NCR terms, aliases, examples, and grouped definitions.
- Turned confusing labels into defined terms with hover/focus help and click-through detail.
- Added a floating Field Key launcher and keyboard support with "?" and Esc behavior.
- Neutralized Tim-specific analytics copy so the NCR tab reads as a general product workflow.

User Impact

- Users can understand NCR roles and labels without leaving the workflow.
- Observer vs Employee vs Author is clarified in plain language and oilfield context.
- The NCR page feels more polished, aligned, and responsive on desktop and mobile.
- Shared CSS polish improves button feedback and page transitions across the app.

Files Included

- `src/glossary.jsx` - Field Key provider, defined terms, panel, launcher.
- `src/glossaryData.js` - NCR glossary terms, aliases, groups, examples.
- `src/pages.jsx` - NCR wiring and copy polish.
- `src/index.css` - Field Key, table, button, transition, and mobile styles.

Validation

- `npm run lint` passed.
- `npm run test:unit` passed with 66 of 66 tests.
- `npm run build` passed; only the known large-bundle warning appeared.
- Commit `fc33ac1` was pushed to `origin/main`.

Committed + Pushed

The Decoder refresh is now on local and remote main.

Code Gates Passed

Lint, unit tests, and build were re-run locally.

Deploy Blocked

The gated deploy stopped because Jake/Merci smoke credentials are missing locally.
