

Trend Watch + Ask-AI

NCR analytics intelligence, live for Tim's morning demo

Report: 2026-06-09

Production: objectivetracker.net

Release commit: f82e943

Deployment: dpl_Bx5sMCR73GseDMnJC2TRthg92HLc

Executive Summary

SandPro OMP now surfaces NCR trends automatically and gives Tim a self-serve Ask-AI workspace directly inside the NCR Analytics tab. The release is deployed and validated on production. The only unfinished production dependency is the missing OpenAI provider environment in Vercel.

Live

Production alias updated.

Smoke Passed

6/6 production smoke after helper fix.

Feature Proof

Trend, Ask-AI, Field Key, Import, Org checks passed.

AI Env Missing

OpenAI keys absent in Vercel production.

EXAMPLE NCR LINKS

What Changed

- Trend Watch now auto-surfaces rising failures, repeat operator issues, critical clusters, stalled open NCRs, and downtime concentration.
- Ask-AI was redesigned into a usable question/answer panel with suggested prompts, ranked rows, example NCR links, loading state, and clear AI/fallback labeling.
- The NCR Analytics top fold now groups exports cleanly and removes the floating orange CSV action.
- The org chart no longer wheel-zooms; explicit zoom and Fit controls now handle resizing.

Validation Run

- `npm run lint`, `npm run test:unit`, and `npm run build` passed locally before push.
- `npm run deploy:prod` deployed successfully and aliased production.
- `npm run smoke:prod` passed 6/6 after tightening the login helper to visible fields and submit button.
- Live proof confirmed Trend Watch click-through, Ask-AI AWC answer, Field Key, KPA Import load, and org zoom behavior.

Open Production Blocker

Vercel production is missing `OPENAI_API_KEY` and `OPENAI_MODEL`. Ask-AI is deployed and working in built-in taxonomy fallback mode, but it cannot be marked as full NCR AI until those env vars are added, production is redeployed, and the footer reads `Answered by NCR AI from the live report set.`
