

Org Chart Hybrid Refresh

Bamboo-style hierarchy, tighter viewability, and cleaner export-ready controls.

Executive Summary

The Organization chart now uses a hybrid Bamboo-style layout: top-level leadership stays horizontal, while deeper reporting groups collapse into compact vertical rails. The chart is easier to scan, uses a smaller 2000 x 1200 working canvas, and keeps Fit/Root/zoom controls in one dedicated canvas control cluster.

What Changed

- Rebuilt Wide view around compact org cards, span markers, and deep vertical branch rails.
- Reduced wide-canvas fallback from oversized blank space to a tighter 2000 x 1200 frame.
- Moved Fit, Root, and zoom controls into one sticky canvas toolbar; removed duplicate control clutter.
- Stabilized Fit so the root chip and first card stay visible below the toolbar after zoom settles.

Validation

- Release preflight passed: lint, unit, schema, auth redirects, build, PWA, mobile crop, and a11y.
- Production smoke passed on the live alias for login shell, admin navigation, and member access.
- Live proof captured Wide + Fit: root chip 24px inside frame, first card 74px inside frame, 17px toolbar clearance.
- Evidence saved at docs/evidence/org-chart-hybrid-refresh-2026-06-10.

Code

Committed and pushed to main.

Deploy

Live on objectivetracker.net.

Proof

Screenshot and metrics captured.

Follow-up

Exports remain on the existing renderer unless Tim wants exact hybrid output.

Scope Note

No database or schema changes were made. No Fix-It, NCR, or production data was mutated. Unrelated dirty workspace files were left untouched.
